$E = m.c^2 + c.dv$ (in considerations of the destruction of a photon and teleportations of quantum state)

Preuve:

$E_N = m.c.N^2 + c.N.dv$ in hypothesis of dark matter

$c.N = (1/T).[\sum t_i (t.<\phi.S/t>.dt)]$

$S = \{(x,y,z)/N.v_i > 0\}$

$c.N = 1/T.[\sum t_i (t.<v_i>.dt)]$

$\phi = \text{flux} = v / t.S$

$\phi = f(t)$ increasing, proof by black holes

$S = g(t)$ lessening et $g(0) = \text{infini}$

The explained bigbangs.

$E = m.c^2 + c.dv$ CQFD

$E = m.c^2 + c.dv$

$\lambda = c/T \quad c = \lambda.T$

$E = m.(\lambda T)^2 + \lambda.T.dv$

$E = m.\lambda^2.T^2 + \lambda.T.dv$

$\lambda^2.T^2 + \lambda.T.dv - E = 0$

$dv = (E - \lambda^2.T^2)/\lambda.T = E/\lambda.T - \lambda.T$ the beauty is thus : $dv = E/\lambda.T - \lambda.T$

We live in a world or the losses of energies are negative and energy conservation (s) positive with an effort.

dv represents a temporal radiation due to quantum teleportation caused by black holes. Dark matter is the speed expressed by themass, are related to mass equivalent teleportation. $E^2 = m.c$ is a chimera of void, because void have its state.

One might note $E = 1/2.m.c^2 + c.dm$ with dm potential temporal energy, but the added mass equivalent to the mass of what is perceived.

Per extension, $t = \int dv$ et donc : $It.\Delta X = B. \int dv$ expressible under the form of velocities...

Thus:

1. A needle planted in the ground emits(utters) radiations.
2. A pile(battery) emits(utters) two currents of opposite senses(directions)
3. A solid in movement is subjected to a close internal tension of v . $N = || v$.
 $N ||$
4. A very high-speed subdued spring(competence) of oscillation keeps(guards) its coefficient of elasticity because the stream of speed aims towards the infinity as long as the spring(competence) does not warm Prop:

has $Dt+dt$ he existe dirac E_d with topology of brilliance(radiation)

Proof: by the behavior of the spin of the atom of hydrogen

Prop: by integral calculus on the modelling of the spring(competence) and considering the spins of atoms the transmutations are thus possible. To finish, to believe in quelquechose is needed a dead man, me I kill nobody, I am a scientist.

Au sujet de la science fiction :

1. A consumer society brings an idea of new radically different civilization seemingly batiments and ways of transportation.

2. The consideration for the individuals is however a relative stagnation of behavioral modus operandi and in a measure of new sciences.

3. The myths remain present on stage in new worlds, but in contrario of the reality expecting(heralding) from jealousy and from greed.

The essential thought is to want to live in peace, to reflect or to find solutions.

Note: the correction of $E=mc^2$ of Einstein and the modelling of neurones by oscillators by applying $E=mc^2 + c.dv$ allows to understand(include) the exact functioning of the brain, as hallucinatory organ aspiring to the thought.

Note: The law of beauty, is something defining dice's face by infinite periods on exact experience of throw in physic. Something that makes up your matrix in $N \times N$.
