

Cunnilingus and fecondity : Nano mero Art over creation.
Never ending work.
The Creation.

Example of graphe of K-system.

Mero Art:

The natural medium of creation :

Sound like I do little destruction here during my creation, but everything was planned by my cat understanding what I've created. It's not hazard solve, it's basically ten years of hard work for 3 minutes and some pictures.

Abstract.

$$f(f^{-1}(t)) \neq f^{-1}(f)$$

for reals $e, K \gg e$

$$\text{Imaginary}(f(t-e)) = F'(\text{Reel}(f(t)) + \text{vect}((f(t-K)))$$

$$f(t+e) = F(\text{Reel}(f(t)) + \text{vect}(\text{Imaginary}(f(t-K))))$$

Optimisation of F ?

what about F relative to F' ?

So manipulating 18 nodes of affine applications intricated in Poincaré volumes given by this neighbourhood integrations :
The scene.

Same object at different places falling down like a sequence to see close to the objects.
(We can see target and camera circles on the picture.)

To give Horus on this 3D volume :

The 3d object contains various meromorphic profile of patterns.

The aggregat of forms given more complex forms, and so on, give images of dreams with correct positions in time about radiation of matter in gravitanionnal field.

Approximation of time travelling is set by position of the object at start and by the forms employed. This give only a dream in possessions of parts.

Glow is added to represent radiation of matter throught time. $E = m.c^2 + c.dv$ that is the real correct equation that explains magnetism too.

My works were during for a decade when I've thought to express myself. I've made research on paintings in wormholes creations with animals, it was some kind of criminology and we worked very hard to concretise wishes.

Resolution of complex system: synthesis of memorisation : me sleeping on my desk.

The time of pause of the picture in the sequence is the same for all meromorphic object and depends of the initial positions.

My house from the window.

* * *

The date is not fixed in the resolution except when I was seeking for sleeping in my house; huge work, and long training to get this picture like a synthesis of memory, and moreover, cats are medium seeing through the medium that is an epileptic remember everytime what he have done. The machine can be extended as shown in the beginning of this document, to precognition and law applications. And perform a time delay in brain functionnaly in consideration of water feeling.

This demo is the prototype of time exploration machine. You can see me trying to sleep at my house, my eyes shoot and in action during the whole demo. The work is based on ball gravitationnal field of falling objects.

Moreover, it is a work of synthetisation of memory based on meroshapes and I do invent IA to work with it as Dead Deer about to maintain a state of mind of resolution.

It's natural thinking, the solve of the system bring memorisations and thought time cats are our best friends.

That is for the asset of our ages.

Me in cunnilingus.

Example of two other scenes without glow :

This quality of dreams requires expansion in due to the add-on of materials, and forms complete each others.

Other important fact, the validation of the sequence : the synchronisation between the texture and the meromorph object. Recursivity and order sets for new verity logic table proof, because the hasard solver rendering gives a time.

Contextually, note that 3D renderings has been often made by remote viewing to my stuffs. Well, it can be demonstrated. I've got some time travelling power regardless to my share and we won millions to lottery with my children. Nevertheless, a brain

stretched never come back to its original and proof can be made with genetic.

Moreover, is the only way to decrypt DNA code. My remote viewing has my DNA signature and matches can be found in the look of the truth !

Works looking for inspirations, works looking for algorithms (environment mapping, bump environment mapping, 3d modeler (through time)) etc, can be sources for DNA decoding.

From my parapsychological remote viewing, things have been made and my DNA signature is present in those who use my brain to make their stuffs.

It can be fun to get all DNAs ! I've set rules for DNA here :

http://laurent.horus.free.fr/orbes_dna.pdf

I made my voice hallucinated, and my view too in considerations of senses even touch can be explained. But some do prefer employ my gives to such a things.

It's the only way to decode DNA completely and get informations about our lifes. It may be possible my name can be a celeb one.

I've built my portal with animals in fact, DNA of birds and cats have to be integrated for inspirations too, and I hope you will participate to the job keeping an hair of you for me and my sons.

Demoscene and artists should be enough to understand DNA ! Because of their view about lifes.

As said in my document :

(in english) http://laurent.horus.free.fr/orbes_dna_en.pdf

Genetic code find its coherence with mental images or mental sound, considering the main scheme of DNA to represents human, it will be possible to create images (of dreams for example due to mental images function). DNA submission to gravity is already modelised with my demo Horus with a simple approach to DNA gravity, Horus is metaballs falling down and I create an image of me sleeping on my desk, it's genetics and the proof of all I said first...

DNA can be modelised with collisions of balls containing meromorphic volum inside !

<http://www.youtube.com/watch?v=LdrDV2a9UAW>

My vision of DNA is in coherence with dreaming that say hallucinating before awakening in assumption of reality. I was in fact the first to contradict Freud theory in a way we can dream about other senses, like flying like a bird. It's merely the sum of the journey that makes a dream in the morning.

The more important is to think about animal intelligence to do pounds in our done, and like the concret of well-thinking about realities. Meanwhile scientists discuss with nonsense about our planet and sci-fi about our future, there is some realities that will relay all of this to some kind of poor minding because we believe we were clever than animals. All is obtained with rights.
