I Orbs

An orb is a partitioning of a sphere under the ribs on transmutations of equivalent weight. The legal equivalent mass disturbances are voronoi diagrams of the sphere. The mass equivalence are singular plots voronoi subject to a single wavelength intensity controlled by the laws of diffusion.

The measures transmutations gradually become discontinuous, and a calculation time of homogenization of the plots.

Homogenization times are relatives for broadcast on the surface of the sphere by the ribs of the differences in measures of mass equivalent load section recursive spherical shape of constant non transmutation to the rest of the space may contain material, gas, other orbs, and the intersections of the emissions of orbs are solved essence of life by Dirac of spacetime.

Eg a black hole is an orb in single fraction

Eg the Earth-Moon system is a dissociation of orb

Ex: the universe is constructed of a energy orb

Hence the concept of atomic orb, orb of molecular

The orbs of nebulae being built orbique radiation because of low mass equivalence.

Each orb is unique in its initial configuration of orb.

II. Human DNA

The same four elements make up the human DNA Coding across time. :

Fluctuations affect sperm through the filter of fetal DNA evolution and fluctuations of the egg.

The rules, vaginal secretions, and loss of water and the origin of sperm ejaculatory defining the mortal coil through the DNA filter.

In 2010, there are still transgressions at the time of reproduction and disorder intellectual properties to abuse.

These are algorithms...!

The maggots :

Two loops with the symbol of recursion in the center. Hence the recursive assembly forms of living to consider the form of a maggot.

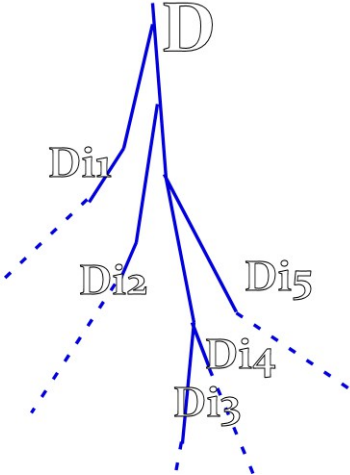

The reduced viscosity or simplified recursion follows the general model of DNA as it is not symmetric, and corresponds to a figure of chaos in genetics.

Each orb, as part time, has quantum state and are camouflaged by the material with similar orbits which generates all the movements that the brain is a stigma of orbs g n rescence integral parts of chromosomes.

Life gives all the visual and gravitational in the sense that gravity is a recursive homeomorphism. Art is an expression of the spirit of gravity.

The body is not symmetrical is the very basis of thought, because the orb mimics. Also each DNA sequence can be recursive and details all of the recursive form of a singular defining the preconceived.

III Regressions and attractors

$$D_i = dD/dA_i$$

A_i attracteur i de N

Il existe V vortex/viscosités tq il existe I pour tout i appartenant à ΣD

Pour toute mesures de différences temporelles.

There is a principle integrator regressive when the amount of work in progress, allowing the measurement of temporary differences between the different events that do more intervening result memory for planning.

IV Quantic Teleportation

Whole universe mimics an orb and orbs. Quantum teleportation is simply a universal principle of mimetic.

This means that from some intellectual property you can turn an anthill into planetary microcosm orbique and make as many comments as you want. More importantly, it is possible to teleport quantum any mechanism from simple keys orbiques.

I say no more, but it is feasible to do anything but move the desert in that world, dispossessing people of their great in other words by changing a few bad habits once.

V Schemes

AMPLIFICATION SENSITIVE

COMPARAISON

DETAILLAGE

INTEGRATION D'ORDRE

Wormholes.

Loops :

For(i=0 to n) do;

VI Conclusion

The truth is that real images are calculated based on reality, this reality is changed by intellectual property, and the exploration time machine is currently a prototype of my design as much as telepathy made simple, as far as the customs of your people have done so.

The species is still in primitive stage, this is just the tip of the iceberg that I control.

The genetic code takes place over time and it will but it is formed from the fetus, provided that the regeneration of neurons can be controlled individually, to have its own genetic code and make synthesizing, it is a functional group on spaces of any size to multiple recursions.

Mental images are suppressed defecation understanding, and created as much by the death of the individual and the mental images of the principle concepts of foetal growth.

But it did exist "trash" DNA.

V Finalities

A random genetic code :

There would be different maneer to decode a sequence of DNA, and genetic code find its coherence with mental perceptions, as mental images. Nature allows us to integrate a large choice of energies of creation.

Genetic codes can also be integrated at sense of hypothesis of Riemann, and mental images are integration of the functionnal sequence and base of dream's generations.

This algorithm define a drawing function, and then can be applied to genetics because closer than other form of interpretations to represent concrete materials, mathematic materials or abstract.
